# A METHOD AND SYSTEM FOR GENERATING A TUTORIAL APPLICATION

## ABSTRACT

5      The invention relates to the field of source code development and in particular a method and system for generating a tutorial application from one or more selected source code elements. The invention provides for a user to select one or source code elements and one or more data 10    elements to be tagged to one or more source code elements. The selected source code elements are tagged using a mark-up language and a tutorial application is generated displaying the tagged selected source code elements and the data elements.
